

29-716

Renault stalk interface with OEM loom

InCarTec

29-716

Renault steering control interface with OEM loom to connect directly to the stalk paddle. For stalk paddles with telephone button.

This can also be used for older paddles without the phone button, the source buttons are reassigned for the phone feature.

Connect the extension loom to directly to the stalk paddle and run to the back of the radio. Connect the yellow mini ISO on the extension loom to the yellow mini ISO connector on the steering control interface. Connect the patch lead to the interface box, then connect the steering control ISO connectors to the new head unit and the car ISO connectors.

This interface is designed for the above stalk paddle. The SOURCE AUDIO button will change source, the phone button will answer (short press) and reject (long press) calls. The volume buttons increase and decrease volume, the MODE OK button skips through presets and the scroll wheel on the back of the paddle skips tracks back and forward.

This interface can also be used with the older stalk paddle pictured above. The two source buttons will act like the SOURCE and phone buttons of the newer paddle. The left source button will change source and the right source button will operate the phone functions, short press to answer, long press to reject.
