

## 50-999

### Volkswagen Crafter fascia

InCarTec

Modifications may be required when fitting a new stereo into a 2017 onward Volkswagen Crafter van.

As shown in the picture, behind the original radio there is only space for a single din radio. The air vent ducts are in the way of fitting a double din body radio.

Depending on the radio being fitted, plastic behind the dashboard may need to be trimmed, or the brackets supplied with this fascia kit may need to be trimmed too.

We recommend this installation is done by an experienced car audio technician only.

NOTE: The original air vent need to be removed from the original panel and refitted into this fascia.
